

# ACCESSORIES

## CUTTERS

SBI Cutters are 15 Inches in diameter (Both 4 & 5 row models). They use a chisel design tungsten carbides for a better performance. Also, our 4 row models have an extra row at the nose which is best suited for the harsh environment. In addition, SBI cutter shafts have 2 working positions, which double their useful life.

### ADVANTAGES:

- Rebuildable cutters.
- Easy maintenance.

### FEATURES:

- 15 inch diameter cutter, which keeps it cooler.
- 2 shaft positions effectively providing 33% longer life expectancy.
- Chisel carbide design for better penetration and less wear.
- Double 4 row, 5 row and full face housings.

## REAMERS

### STANDARD AND EXPANDABLES

We provide reamers in all sizes to meet our clients requirements.

## PIPE

Our drill pipes have the advantage of being able to recut the DI-22 threads when necessary, giving them a more useful life. Also, our 8", 10", 11 1/2", 12 7/8" drill pipes have more shoulder area between connections compared with conventional ones.

## STABILIZERS

Used in the piloting and reaming process for hole accuracy.

## STEMS

These are used to connect the reaming head to the drill string with a DI-22 thread.

## BIT ROLLERS

The Bit Roller stabilizer is used in the piloting process, connecting directly to the pilot bit, extending the life expectancy of the stabilizers.

## SADDLES

Saddles are an essential component for proper angle and profile for our reaming heads.
